

Hockey Goalie Stats Main App User Manual

Complete guide for new users

This guide is written for a new user. It explains the purpose of the system, how to enter and review data, how to use reports, and how to access the included resources.

Contents

- 12 12. Resources Screen
- 13 13. Backup and Restore
- 14 14. Recommended Workflow
- 15 15. Troubleshooting

1. What the Main App Does

Hockey Goalie Stats is the full analysis app for field-hockey goalkeeper performance. It stores goalies, teams, matches, shots, heat maps, ratings, shootouts, reports, backups and reference resources.

Use the main app after match recording to import or enter data, correct details, review performance trends, generate reports and preserve the long-term goalie record.

2. First Setup

Start by creating goalie profiles and team names. Accurate profile and team data makes reports clearer and helps long-term tracking.

- Add each goalie with the available profile fields.
- Add or select the home team and opponent names consistently.
- Use Backup and Restore regularly so local app data can be recovered if the browser or device is reset.

3. Recording and Importing Matches

Matches can be entered directly in the main app or imported from the companion Recorder app. The Recorder is best for live game capture; the main app is best for review, editing and reporting.

- 1 Open the correct goalie profile.
- 2 Create a new match or import a Recorder JSON file.
- 3 Review the match details, score, period count and team names.
- 4 Check shot records and heat map placements before generating reports.

4. Shot Data Definitions

- Shot Outcome: Save, Goal or Angle Closed Off.
- Shot Situation: Normal Game Play, Penalty Corner, Penalty Stroke or 8 Second 1v1.
- Shot Type: 1st Shot, Rebound, In Game 1v1, Own Goal or Other.
- Out Numbered: Not Out Numbered, 2 vs 1, 3 vs 1 or 4+ vs 1.
- Penalty Stroke records use the fixed P spot. Angle Closed Off uses the D heat map only.

5. Match Editing

Use the Match Editor to correct match details, scores, shot categories, heat map placements and shootout data after a match has been recorded or imported.

- Edit shot outcome, situation, type, outnumbered status and rebound result.
- Edit heat map placement for normal shots when needed.
- Add, edit or delete shootout data where applicable.

6. Understanding Key Stats

- Save Rate: the percentage of goal attempts saved.
- Defense Rate: saves plus angles closed off divided by total shot records.
- Rebound Control: whether rebounds are directed safely or dangerously.
- Outnumbered Attempts: overload chances faced by the goalie.
- Shot Situation and Shot Type breakdowns: show where the goalie performs well or struggles.

7. Heat Maps

Heat maps show where events are happening and where goals or saves are occurring. The D heat map tracks the origin or action area. The goal-box heat map tracks the finishing or save location where applicable.

Report heat maps use only the matches included in the selected report. The dot numbers match the report shot sequence, so the heat map can be cross-referenced with report timelines.

Use the heat map legends to interpret dot colours, shot numbers and situation outlines.

8. Timeline Numbering in Reports

Single-match reports use normal match shot numbering.

When a report includes more than one match, the timeline text shows two numbers in this format: ReportShotNumber (MatchShotNumber).

For example, Shot 27 (4) - Save means the shot is number 27 in the full report selection and shot number 4 within that individual match. This lets the user match the timeline event to the numbered point on the report heat map.

The timeline dot itself stays simple and shows only S, G or A. S means Save, G means Goal and A means Angle Closed Off. End of Period remains shown with a triangle.

Timeline markers also use the same Shot Situation outlines as the heat maps: normal/no special outline for Normal Game Play, black for Penalty Corner, blue for Penalty Stroke and purple for 8 Second 1v1.

9. Reports

Reports convert recorded data into coaching information. Select the report type, choose the relevant goalie and range, then generate the report.

- Individual Match Report
- Five Game Report
- Year Report
- Goalie Development Report
- Opponent Analysis Report
- Team / Home Team Report
- Shot Situation Report
- Period Report
- Training Focus Report
- Data Driven Development Report

10. Data Driven Development Report

The Data Driven Development Report is the most complete coaching report. It includes the goalie profile, matches included, summary stats, graphs, shot situation and shot type stats, period summaries, heat maps, shootout summary where applicable, training focus and match timelines.

Training Focus shows only useful coaching points. Focus rows with a score of zero or insufficient event data are omitted so the section stays concise. If no useful focus areas are identified, the report displays a short message instead of filler rows.

11. Shootouts

Shootout data is kept separate from normal match-play shot totals so that normal game statistics remain accurate. Reports can still show shootout results, save rates and summary information.

12. Resources Screen

The Resources screen is opened by clicking the Resources word after the version number in the footer.

- Data Driven Development Theory PDF
- FIH Rules of Hockey 2026 PDF
- Hockey Goalie Stats Main App User Manual
- Goalie Stats Recorder User Manual

13. Backup and Restore

Use Download JSON Backup before major changes, before moving devices, and before clearing browser data. Restore only from trusted backups created by this app.

14. Recommended Workflow

- 1 Record live events using the Recorder app or enter the match directly.
- 2 Import the Recorder file into the main app.
- 3 Review and correct shot details and heat map points.
- 4 Generate the Data Driven Development Report.
- 5 Use Training Focus and heat maps to plan coaching sessions.
- 6 Download backups regularly.

15. Troubleshooting

- If the app appears outdated, refresh the browser or clear the PWA cache.
- If PDFs do not open, use the download button in Resources and open from the device files app.
- If a match looks wrong after import, inspect the Match Editor fields and confirm the goalie, teams and period count.
- If a report is missing data, confirm the selected match range includes matches with recorded shots.
