

Goalie Stats Recorder User Manual

Companion recorder guide for new users

This guide is written for a new user. It explains what the app is for, how to set it up, how to record and review goalie performance data, and how to use the reports and resources included with the system.

Contents

- 1 1. What the Recorder Does
- 2 2. Match Setup
- 3 3. Recording a Shot
- 4 4. Shot Situation and Shot Type
- 5 5. Periods and Timeline
- 6 6. Shootouts
- 7 7. Finish and Export
- 8 8. Refreshing the PWA
- 9 9. Best Practice

1. What the Recorder Does

Goalie Stats Recorder is the companion app for fast live match recording. It captures events quickly on a phone or tablet and exports a JSON file for the main Hockey Goalie Stats app.

2. Match Setup

- Enter goalie name, date, home team and opponent team.
- Set the number of periods before the match starts.
- Check details before recording live events.

3. Recording a Shot

- 1 Choose the outcome: Save, Goal or Angle Closed Off.
- 2 Choose Shot Situation.
- 3 Choose Shot Type.
- 4 Choose Out Numbered value.
- 5 Choose Rebound Result.
- 6 Place the D heat map point and the goal-box point where applicable.
- 7 Add an optional note and save.

4. Shot Situation and Shot Type

- Shot Situation: Normal Game Play, Penalty Corner, Penalty Stroke or 8 Second 1v1.
- Shot Type: 1st Shot, Rebound, In Game 1v1, Own Goal or Other.
- Penalty Stroke automatically uses the P spot on the D heat map.
- Angle Closed Off does not need goal-box placement.

5. Periods and Timeline

Use End of Period markers at the correct time. These markers help the main app build period summaries and timelines correctly.

6. Shootouts

Only use the shootout section when a drawn game proceeds to a shootout.

- Home attempts at the opposition goalie only record Goal or Save.
- Opponent attempts at the tracked goalie record result, save method and note.
- Shooter names are not recorded.

7. Finish and Export

- 1 Complete ratings after the match.
- 2 Add shootout data only if required.
- 3 Export the JSON file.
- 4 Import the JSON file into the main app.

8. Refreshing the PWA

If the Recorder appears to be using older cached files or an old icon, tap the version badge five times and confirm the forced refresh. If an iPhone home-screen icon still does not update, remove and re-add the home-screen app.

9. Best Practice

- Record events immediately after they happen.
- Use Normal Game Play unless a special situation clearly applies.
- Keep notes short and useful.
- Export soon after the match and back up the main app after import.
